Supplementary Notes and Explanations

(1) General
This food contact compliance declaration is based on declarations of compliance, test reports, specifications and other information provided by the respective manufacturers and upstream suppliers.
Unless expressly stated otherwise, the information has not been independently verified by the distributor.

(2) Migration Testing
Overall migration (OML) and specific migration (SML) testing is generally performed on material families, formulations, product series or worst-case scenarios.
The resulting documentation generally applies to all covered article variants, provided that material composition, manufacturing process and intended use remain identical.

(3) PFAS
The assessment regarding PFAS is based on manufacturer and supplier declarations.
Analytical testing for individual PFAS substances, Total Fluorine (TF) or Total Organic Fluorine (TOF) is only available where such testing has been expressly performed by the manufacturer or an accredited laboratory.

(4) MOSH / MOAH
Statements regarding MOSH and MOAH are based on manufacturer information, raw material specifications, declarations of compliance and, where available, NIAS assessments.
Unless expressly documented otherwise, such statements do not constitute independent analytical testing covering all possible mineral oil hydrocarbons.

(5) Bisphenols
Statements regarding Bisphenol A (BPA), other bisphenols and bisphenol derivatives are based on manufacturer and supplier declarations as well as available raw material information.

(6) Conditions of Use
Food contact compliance applies exclusively to the food types, contact times, temperatures and conditions of use described in the respective manufacturer documentation.
Any deviation from the specified conditions may require a separate assessment.

(7) Basis of Documentation
The compliance assessment is based on the manufacturer information available at the time of issue.
Updated manufacturer documentation may require revision of the assessment.

(8) Disclaimer
This annex is provided for information purposes only.
Only the current original declarations of compliance, test reports and manufacturer documentation shall be considered binding.
