Material specification

Series Trockenbeutel APG

Version 26_462_EN
Date 10.11.2026

This declaration applies to the following article numbers, including all colour variants and all article numbers derived therefrom 102087

This document is provided for information purposes only. Only the current original manufacturer documentation and declarations of compliance issued by the respective manufacturer shall be considered binding. In the event of discrepancies, the manufacturer documentation shall prevail.

Supplementary Notes and Explanations

(1) General
This material specification is based on specifications, declarations of compliance, safety data sheets, test reports and other technical documentation provided by the respective manufacturers and upstream suppliers.
Unless expressly stated otherwise, the information provided is based on manufacturer information and does not constitute independent analytical testing performed by the distributor.

(2) PFAS
The assessment regarding per- and polyfluoroalkyl substances (PFAS) is based on manufacturer and supplier declarations as well as available raw material specifications.
Analytical testing for individual PFAS substances, Total Fluorine (TF), Total Organic Fluorine (TOF) or comparable screening methods is only available where such testing has been expressly performed by the respective manufacturer or an accredited laboratory.

(3) Bisphenols
Statements regarding Bisphenol A (BPA), other bisphenols and bisphenol derivatives are based on manufacturer and supplier declarations as well as available raw material specifications.
Unless otherwise documented, no independent analytical testing for BPA, BPF, BPS or other bisphenol compounds has been performed.

(4) REACH and SVHC
The assessment regarding Regulation (EC) No. 1907/2006 (REACH) and the Candidate List of Substances of Very High Concern (SVHC) is based on the manufacturer information available at the time of document preparation.
Updates to the Candidate List may require an update of the underlying manufacturer declarations.

(5) Product Families and Material Groups
Manufacturer testing, declarations of compliance and technical assessments are generally performed on material families, product groups, formulations, material/colour combinations or worst-case test specimens.
Accordingly, such documentation generally applies to all covered article variants, provided that material composition, manufacturing process and intended use remain identical.

(6) Heavy Metals
Statements regarding lead, cadmium, mercury and hexavalent chromium are generally based on raw material approvals, supplier declarations, material specifications or manufacturer test reports.
Product-specific laboratory analyses are generally not available for each individual article number.

(7) MOSH / MOAH
Statements regarding MOSH (Mineral Oil Saturated Hydrocarbons) and MOAH (Mineral Oil Aromatic Hydrocarbons) are based on manufacturer information, raw material specifications, declarations of compliance, NIAS assessments or other manufacturer declarations.
Unless expressly documented otherwise, such statements do not constitute independent analytical testing covering all possible mineral oil hydrocarbons.

(8) Disclaimer
This annex is provided for information purposes only.
Only the current original specifications, test reports and declarations of compliance issued by the respective manufacturer shall be considered binding.
